

Why You Should Learn to Play Ukulele

Ukulele or well known as the uke is a four-stringed musical instrument made from wood that looks similar to a small classical acoustic guitar. This instrument is usually associated with tropical and happy vibes.

Ukulele is easy to learn

The ukulele is relatively easier to learn than the guitar or other stringed instruments. The strings are made from nylon that feels gentler on your fingertips and doesn't give you finger pain like the guitar does. In addition, this little instrument only has four strings, which makes chord shapes easier to learn.

Ukulele is inexpensive

Buying a ukulele would not drain your wallet compared to other instruments, especially a guitar. You can buy a good new ukulele for just \$100, depending on the type of ukulele. Ukulele has four types: soprano, concert, tenor, and baritone. These types are differentiated by their body shape and their outcome sounds. The soprano type is the smallest and most popular one for beginners.

Ukulele is easy to carry

The ukulele is the best travel instrument. You can take it virtually almost anywhere since it is small and not heavy. Putting it down in the back of your car would not take up so much space. Bring it to the beach or lake if you are camping or picnicking with your friends. Surely the uke will lift the mood and cheer everyone around.

Most songs are playable using ukulele

Don't worry; you can play many popular songs on the ukulele, plus various genres. Amazingly, even songs with complex chords can be transformed down to a simple version in the ukulele, making them easier to play since its four strings flexibility.
